

High Output Hayabusa Kit

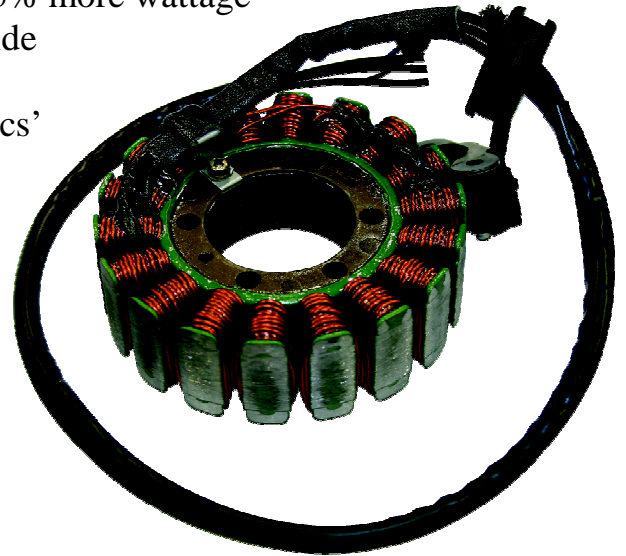

Rick's Motorsport Electrics is proud to offer a new high output kit for the Hayabusa's. As seen on the Kehler Quad from Tricked Out Custom Cycles in Hatboro, PA., the kit features a large casting, 40 amp rectifier/regulator and a new high output stator.

The rectifier regulator is a large casting design that dissipates the heat to prevent burnouts. It also regulates stators of 40 amps of power, making it the perfect match to Rick's high output stator.

The Hayabusa stator has been field tested to deliver 25% more wattage

than stock. Original equipment Hayabusa stators provide approximately 400 watts of power while maintaining about 13.5 – 15.0 volts. The Rick's Motorsport Electrics' high output stator provides slightly over 500 watts of power at the same voltage. This equates to a 25% improvement over stock.

“The Kehler Quad is the perfect illustration of why our high output stator and 40 amp rectifier/regulator combo is great for all the Busa tuners out there with electrical accessories on their machines,” says company president Rick Shaw. “We are very happy to have this Busa Quad at our booth this year in Indy.”

Busa Kit Stats:

- 40 amp, large casting rec/reg
 - \$120 Retail on rec/reg
- High output stator = 25% over stock!
 - \$150 Retail on stator
- Great to power extra lights & electrical accessories
